

Dhista Dwi Nur Ardiansyah

Yogyakarta, Indonesia | dhistadna@gmail.com | +6281915400053 | [GitHub](#) | [LinkedIn](#)

Backend Engineer with a strong foundation in building scalable, high-performance systems using Golang. Experienced in designing robust APIs, optimizing database architectures, and implementing CI/CD workflows. Passionate about software engineering, AI solutions, and cloud technologies, with hands-on experience from various projects in SaaS, AI-driven applications, and fintech. Always eager to learn, adapt, and contribute to impactful solutions.

Education

Universitas Negeri Yogyakarta <i>Bachelor's degree in Bachelor Informatic Education Engineering</i> GPA: 3.71/4.0 (155 credits) • Received the award for the most innovative game at IGSi Game Jam. • Served as a Teaching Assistant at the Department of Electronic and Informatics Engineering Education. • Earned a gold medal at the 2021 Lomba Inovasi Digital Mahasiswa (LIDM) for developing the AQG (Automatic Question Generator) tool for educators. • Involved in various research projects. • Presenter at Guest Lecturing for Student Final Project. Certificate	Yogyakarta, ID Aug 2019 – Apr 2024
---	---------------------------------------

Professional Experiences

Universitas Nahdlatul Ulama Yogyakarta Software Engineer (Contract, Hybrid) • Designed and developed multiple backend systems to support university operations, focusing on scalability, reliability, and maintainability. • Architected a real-time voucher reimbursement system using TypeScript (Express.js) and MongoDB, including multi-session handling and WebSocket-based live updates. • Engineered a budgeting system for staff, ensuring structured financial tracking and efficient resource allocation. • Built and secured internal APIs for staff data services, implementing API key-based authentication and access control for safe inter-service communication. • Designed auditing and logging mechanisms across systems to ensure data integrity, traceability, and compliance. • Defined API contracts and documentation using Postman, improving collaboration and consistency across internal teams.	Yogyakarta, ID Apr 2024 – Now
---	----------------------------------

PT. Kanca Sukses Bersama Software Engineer (Freelance, Hybrid) • Developed a Knowledge Management System using Golang (backend) and Next.js (frontend) with PostgreSQL as the primary database. • Built modules to manage customer complaints, product knowledge, and customer data for improved operational efficiency. • Designed a scalable and secure backend architecture to handle high volumes of customer-related data. • Implemented intuitive frontend interfaces to streamline data access and complaint resolution for internal users.	Yogyakarta, ID Jun 2025 – Aug 2025
---	---------------------------------------

PT. Nordspec Mandala Persada (IT Solution and Software As a Service Company) Backend Engineer (Contract, On-site) • Developing and maintaining scalable backend services using Golang, ensuring high performance, security, and reliability. • Designing structured ERD and optimizing database architecture to improve efficiency and data integrity across various applications. • Building and documenting APIs using Postman and Swagger, enabling seamless integration and efficient communication between services. • Implementing CI/CD pipelines with GitLab Runner, automating deployment processes, and collaborating with teams through GitLab for version control and streamlined development workflows.	Yogyakarta, ID Dec 2024 – Apr 2025
---	---------------------------------------

PT. Qiscus Tekno Indonesia (AI-Powered Omnichannel Customer Engagement Platform to Improve Sales and Enhance Customer Loyalty) Web Developer (Internship, Hybrid) • Designed and implemented scalable backend services using Golang and Ruby on Rails, ensuring robust and efficient system performance.	Yogyakarta, ID Aug 2024 – Nov 2024
---	---------------------------------------

- Developed and integrated chatbot solutions utilizing Dialogflow to enhance conversational AI capabilities.
- Collaborated with cross-functional teams to optimize backend processes and deliver seamless user experiences.
- Gained hands-on experience in building and maintaining backend infrastructure for real-time communication platforms.

PT. Arkabyte Teknologi Indonesia (Software company provides custom software solutions) Semarang, ID
Software Engineer (Freelance, Remote) Dec 2023 – Feb 2024

- Developed and maintained web applications using Laravel and Node.js, leading to a 30% improvement in user experience.
- Designed and implemented RESTful APIs to facilitate seamless integration between frontend and backend systems, enhancing application efficiency and scalability.

PT. Divistant Teknologi Indonesia (Software company provides services in web, mobile, and automatic software development) Yogyakarta, ID
Software Engineer (Freelance) Jul 2021 – Oct 2021

- Spearheaded the development and maintenance of a Laravel-based web application, increasing system efficiency and performance by 25%.
- Contributed to a project recognized for its exceptional user experience, boosting user engagement and retention by 50%.
- Worked with Unity to create innovative solutions, further expanding the company's range of software offerings.

Startup Campus by Achmad Zaky (Indonesian non-profit organization that support science and tech education, entrepreneurship development, impact investment breakthrough research) Jakarta, ID
Mentee Aug 2021 – Dec 2021

- [Certificate](#) || [Pitch Deck](#)
- Founded and operated Medichain, showcasing strong entrepreneurial skills and leadership capabilities.
 - Led the creation of the Minimum Viable Product (MVP) for Medichain's first platform, integrating Electronic Medical Records (EMR) powered by private blockchain technology.
 - Led the team to win the Intern of the Month Award for exceptional performance and consistent results.

PKM Center UNY (Student Employment Under the Universitas Negeri Yogyakarta Student Affairs Department) Yogyakarta, ID
IT Staff (Data Team Leader) Jul 2020 – Jun 2022
[Certificate](#)

- Developed, maintained, and optimized the Student Research Information System using Laravel, improving system performance and usability for students and faculty.
- Enhanced database structure and application logic, ensuring efficient data management and seamless integration within the research system.
- Provided hands-on guidance and technical support to PKM Center users, facilitating smooth system navigation and troubleshooting technical issues.
- Implemented dynamic data visualizations, reducing decision-making time by 25% and leading to a 20% improvement in project evaluation efficiency.
- Reduced system downtime and technical issue resolution time by 40%, increasing overall user satisfaction and productivity.

Organizational Experiences

INFINITE UNY (INFINITE is an Information Technology Division under the auspices of UNY Technology Engineering) Yogyakarta, ID
Head of Competition Jan 2021-Apr 2024

- Directed annual competitions, consistently surpassing participation targets by 20%, enhancing visibility and recognition within the technology community.
- Enhanced administrative efficiency by 30% through process streamlining and team training initiatives.
- Achieved a 25% reduction in administrative errors through quality control measures and regular audits.
- Implemented a comprehensive achievement tracking system, resulting in a 30% decrease in errors and ensuring accurate documentation of members' accomplishments.
- Effectively transitioned competitions to virtual formats, sustaining student engagement and participation levels during the pandemic.

Projects, Course, & Achievements

Certifications & Training
- [Indosat Ooredoo Digital Camp \(IDCamp\): Belajar Dasar AI](#) Dec 2024

- Indosat Ooredoo Digital Camp (IDCamp): Belajar Membuat Aplikasi Web dengan React	Nov 2024
- Indosat Ooredoo Digital Camp (IDCamp): Belajar Membuat Front-End Web untuk pemula	Oct 2024
- Indosat Ooredoo Digital Camp (IDCamp): Belajar Dasar Pemrograman Web	Sep 2024
- Indosat Ooredoo Digital Camp (IDCamp): Architecting on AWS by Dicoding	Mar 2024
- Indosat Ooredoo Digital Camp (IDCamp): Fundamental Back End Applications by Dicoding	Feb 2024
- Indosat Ooredoo Digital Camp (IDCamp): Build Beginner-Level Back End Applications by Dicoding	Oct 2023
- Indosat Ooredoo Digital Camp (IDCamp): Cloud Practitioner Essentials by Dicoding	Oct 2023
- Indosat Ooredoo Digital Camp (IDCamp): Fundamental Javascript by Dicoding	Oct 2023

Achievements

- [Gold medal winner at the 2021 Lomba Inovasi Digital Mahasiswa \(LIDM\)](#) Sep 2021
- [Most Innovative Game \(Nge-Lag Game\) at Indigo Game Startup Incubation](#) Apr 2021

Projects

- [UNUY Wiki](#) March 2026
Developed a full-stack internal wiki application using Vue.js for the frontend and Golang with Fiber for the backend. The platform centralizes documentation for UNUY projects stored in GitLab, making it easier for the IT and product teams to manage, update, and access project documentation in one place.

Integrated Gemini as the LLM model with RAG capabilities, enabling an AI chat feature that can understand project documentation and help users explore technical or business context more efficiently. Implemented access control using UNUY's standard RBAC service, ensuring role-based permissions across documentation and project resources. The system is currently under active development to improve documentation workflows and support better knowledge sharing across teams.
- [UNUY Staff API](#) Jan 2026
Developed a RESTful staff data management API using Go, Go Fiber, and MongoDB to centralize staff information access across UNUY. The service provides a single source of truth for internal staff data, helping standardize data usage across university systems and reducing inconsistencies in future integrations. Implemented an API access management and review flow, allowing the IT team to evaluate and control access requests, especially for users or systems outside the IT department. The API improves data governance, simplifies internal system integration, and ensures staff information is delivered through a secure and maintainable backend service.
- [UNUY Budgeting](#) Nov 2025
Developed a RESTful API for UNUY's internal budgeting system using TypeScript and MongoDB. The system supports complex university budgeting workflows, including budget submissions, review processes, approval flows, fund disbursement, and accountability reporting. Implemented RBAC-based access control with configurable custom roles managed by administrators, ensuring secure and structured access across different user responsibilities. The platform helps the finance team monitor budgeting operations more efficiently, improve process transparency, and manage financial requests in a more organized way.
- [UNUY Makan Siang Project](#) June 2025
Developed RESTful API and WebSocket backend services for UNUY's staff lunch coupon system using TypeScript, MongoDB, and Socket.io. The system enables real-time coupon tracking, automatically synchronizes quota updates to the application, and supports controlled coupon sessions for daily operations. It also provides multi-tenant support for canteen merchants and includes an on-demand reimbursement workflow for coupon redemption and transaction accountability.
- [PIC Service on oltime](#) March 2025
Developed a RESTful backend service that enables supervisors to manage field workers and drivers. Built with Go, Chi router, and GORM, the service features worker attendance tracking, driver-passenger assignment management, and real-time status monitoring. Implemented efficient database queries with pagination and search capabilities while following domain-driven design principles with clean separation of concerns. The system provides supervisors with comprehensive tools to coordinate workforce across multiple companies and locations through a structured, maintainable API.

- [Paylink](#)

Developing the backend for Paylink, an e-wallet system built with Golang, PostgreSQL, and Stripe to facilitate seamless payroll transfers from Oltime Dashboard. Implemented wallet-to-wallet transfers, bank withdrawals, and OTP-based transaction verification via sms or email.

Jan 2025
- [Oltime Dashboard](#)

Maintained and optimized the Oltime Dashboard, an all-in-one worker management and job-seeking platform. Worked with Laravel, MySQL, and R2 storage to enhance system stability and performance

Dec 2024
- [Notuline](#)

Developed the backend for Notuline, an AI-powered assistant for recording, noting, and summarizing meetings. Built using Golang (Fiber framework), with PostgreSQL as the database and Supabase for file storage, ensuring efficient data management and seamless user experience

Dec 2024
- [Road Damage Detection Using YOLO v8](#)

Developed an AI-driven system to detect road damages by fine-tuning the YOLO v8 model. Utilized datasets from the Indonesian Ministry of Public Works and Housing (PUPR) and the [RoadDamageDetector](#) repository to enhance model accuracy. This project was submitted to the AI-based Road Damage Detection Competition (Sayembara RDD) organized by Kementerian PUPR.

Oct 2024
- [Loyalty offer chatbot](#)

Built a WhatsApp chatbot using **Dialogflow, Python, and WA Flow** to automate customer interactions, enhancing response efficiency and support.

Sep 2024
- [Moengage Middleware](#)

Developed a **webhook middleware service** using **Golang and PostgreSQL** to connect WhatsApp broadcast message templating and analytics between **Qiscus** and **MoEngage**. Designed to support **multi-tenant** architecture for scalable and efficient message delivery.

Aug 2024
- [Custom Agent Allocation](#)

A backend service developed for Qiscus to efficiently distribute customers to agents while ensuring load balancing. Each agent has a configurable limit, adjustable through environment variables. The service is built using Golang and leverages a queue-based system to manage assignments. PostgreSQL is utilized to track queue statuses and gather statistical data, ensuring transparency and performance monitoring.

Aug 2024
- [Automation Question Generator: Manage the Cloud of AQG](#)

AQG Back End is a backend service designed to support an NLP-based Automatic Question Generator (AQG) model. This service is implemented using Python and the Flask framework, and it is deployed using Docker and Kubernetes on Google Cloud Platform (GCP). The AQG Back End processes text inputs and generates relevant questions automatically, leveraging advanced natural language processing techniques.

Dec 2023
- [Medichain](#)

Medichain is an Electronic medical record integration platform that makes it easier for doctors, patients, and hospitals to access health records with private blockchain technology.

Dec 2021
- [Automation Question Generator: ML Engineer](#)

The Automatic Question Generator (AQG) is an advanced NLP system that automatically generates contextually relevant questions from text inputs. It streamlines question creation for educators, trainers, and content creators by leveraging machine learning techniques to analyze text and formulate questions accurately and efficiently.

Aug 2021
- [Nge-Lag: Attack with your past](#)

Ngelag is an innovative and strategic game where players must outsmart their enemies by using their past moves as a weapon. This unique gameplay mechanic challenges players to think ahead and strategically plan their actions.

Apr 2021
- [Kreweng Race: Racing Game](#)

Kreweng Race is an exciting and innovative racing game that offers players a unique and engaging racing experience. Envisioning the game's unique themes and mechanics that set it apart from other racing game, Designed the core gameplay elements, including track layouts, racing dynamics, and in-game challenges, and developed and integrated the game's audio elements, including sound effects and background music.

Feb 2021
- **Student Research Information Management System**

Redesigned and updated the front end of the application to improve user interface (UI) and user experience (UX), ensuring a more intuitive and accessible platform.

Jun 2020
